MedShare for BlackBerry Case Study Now Available

Therapy Partners Inc. sees immediate benefits including more visits per week, improved employee retention, and more efficient billing and payroll

[Waterloo, Ontario] – MedShare today released the first in a series of case studies of clients implementing their wireless point of care solutions for home health care.

Therapy Partners Inc., a home health care agency based in Guelph, Ontario, delivers physiotherapy, occupational therapy, speech language, social and nutrition counseling services to clients in their homes, schools or commercial settings. They have implemented MedShare for BlackBerry for their health care workers by equipping them with BlackBerry 8830s which are linked to the MedShare back office system. The Always On feature of MedShare for BlackBerry allows the health care workers to operate in rural settings where wireless data services are not 100% available.

“Our therapists and counselors can capture everything on their BlackBerry right at the point of care whether in the city or country setting,” explains Christine Reno, Business Director for Therapy Partners Inc. She added, “And the data comes in wirelessly and directly to our MedShare database.”

The study is available on MedShare’s company website.

MedShare has made substantial investments in point of care solutions over the last year to extend its enterprise home care agency offering to the clients’ home utilizing the latest in high speed wireless networks. A recent research report on Wireless Home Care Solutions published in August 2007, by VDC Research, suggests that Home Care Organizations adopting wireless technology can expect return on investments in under 6 months while improving the quality of care delivered. Please contact MedShare to arrange for a copy of the wireless research report.

About MedShare

MedShare is an award-winning provider of information and communication technologies to the North American home health care sector which is the fastest growing segment of the health care sector. MedShare’s suite of software is built on a patent pending software platform for management of electronic health records and agency operations and is available on office systems, BlackBerry and tablet mobile data devices to meet the evolving clinical and administrative needs of home health care professionals.
