MedShare Files for Patent Protection and Discloses New Inventions

New discovery provides platform to fundamentally transform home health care using mobile data technology to bring electronic medical records to the bedside in the client's home.

[Waterloo, Ontario] – MedShare today announced the filing of patent applications in which the company discloses new inventions and seeks patent protection for key aspects of its MedShare HC technology used to manage home health care operations and track client medical records.

"Our development team was faced with the daunting challenge of applying technology in home health care to dramatically increase efficiencies, while at the same time improving medical outcomes," said J.Paul Haynes, CEO of MedShare Inc. "They rose to this challenge and created several related inventions that provide a platform to completely transform the way home health care services are managed and client medical records tracked. The team was very creative in their design, which combines back office and mobile data technology. This kind of 'thinking out of the box' has led to this patent application and reveals just how much innovation has been occurring at this firm over the past year."

MedShare introduced its flagship product MedShare HC in the summer of 2006 and since then the product has been enhanced and improved substantially including the release of MedShare for BlackBerry earlier this year. While working to enhance MedShare HC and extend its capabilities to meet the home healthcare market's unique requirements, the company's development team made several innovative discoveries that are now the subject of pending patents.

"Submitting patent applications is one of the most important milestones an engineering development team can achieve as it transforms intellectual effort into tangible value." said Mr. Haynes. "Patent offices allow patent applicants to designate their inventions as PATENT PENDING from the date of filing, and this fact alone, inspires our staff and customers."

About MedShare

MedShare is an award-winning provider of information and communication technologies to the North American home health care sector which is the fastest growing segment of the health care sector. MedShare HC is a patent pending software platform for management of electronic health records and agency operations and is available on both office systems and BlackBerry mobile data devices to meet the clinical and administrative needs of home health care professionals.
